

Comparison Of Software VS our Hardware Based Cloning

Software

Proprietary Hardware

- | | |
|--------------------------------------------|-----------------------------------------------------------------------------------------------|
| 1) Danger of Data loss due to wrong | 1) Source disk is 100 % write Protected |
| 2) Hidden area not accessible | 2) Entire disk sectors including hidden can be Captured |
| 3) Unallocated disk space cannot be copied | 3) Even Unallocated (free) space can captured |
| 4) Cloning not possible for failing disks | 4) Using advanced technology technical Parameters like firmware can be effectively controlled |
| 5) Not Suitable for bad sector disk | 5) Bad sectors can be skipped. |

Applications of Disk cloning

- 1) Hard disks of industrial PC's , Servers and of Automation equipment
Can be cloned to reduce downtime
- 2) In Forensic disk investigations
- 3) No need to reinstall OS /Software , cloned disk can be replaced directly instead.
